Kamlesh Gorade

Mumbai, India | +91 9172549434 | kamleshgorade1@gmail.com | linkedin.com/in/kamleshgorade

Professional Summary

DevOps Engineer with 2.8+ years of experience managing enterprise-scale cloud infrastructure, multi-environment CI/CD release pipelines, and production support. Proficient in automated deployments (Harness, Jenkins), container orchestration (Kubernetes, Rancher, OpenShift), DevSecOps vulnerability remediation, and system observability. Strong expertise in Agile delivery, release governance, and cross-functional coordination with global stakeholders.

Professional Experience

DevOps Engineer — Feb 2024 – Present
Tata Consultancy Services (Client: Kroger), Mumbai, India

- Orchestrated multi-environment releases (Dev, Test, UAT, Production) using Harness and Rancher/Kubernetes, executing pre-flight release readiness and post-deployment validation checks.
- Monitored enterprise platform health and remediated high-severity production incidents across microservices using Dynatrace, Datadog, Grafana, and Kibana.
- Operated and maintained Kubernetes environments using Rancher for deployment orchestration and container lifecycle management, with architecture adaptable to OpenShift-managed clusters.
- Partnered with global Engineering, QA, and Support teams (across distributed time zones) to manage release dependencies, deployment cutovers, and operational handovers
- Maintained environment stability and configuration parity across non-production and production clusters, coordinating change records and incident resolution in Jira / ServiceNow.

Key Projects

Scalable CI/CD Pipeline with Kubernetes & GitOps — *Personal Project*

- Designed end-to-end CI/CD pipeline using Jenkins, Docker, and Kubernetes for fully automated, zero-downtime deployments.
- Explored GitOps-based deployment using ArgoCD to manage declarative, version-controlled application state across environments.
- Reduced deployment time by 40% and improved release consistency across development, staging, and production environments.

Multi-Tier Containerization & Security Hardening (Docker) — *Personal Project*

- Containerized full-stack applications (Flask/PostgreSQL/Nginx & React/Node.js) using Docker Compose with isolated network tiers, health checks, and persistent named volumes.
- Optimized image footprint by 87% (1.14 GB to 144 MB) via multi-stage builds and slim base images; scanned with Trivy to eliminate critical vulnerabilities (329 down to 44 with 0 critical).
- Hardened container security & operations by enforcing non-root users, runtime secret injection via environment variables, and establishing standardized container log diagnostics.

Monitoring and Alerting System — *Personal Project*

- Built end-to-end monitoring system using Prometheus and Grafana to track real-time system metrics and SLIs.
- Configured proactive anomaly-detection alerting rules, reducing unplanned downtime and improving debugging efficiency.

Technical Skills

- **Languages & Scripting:** Bash/Shell Scripting, Linux/Unix Administration
- **Version Control:** Git, GitHub
- **Cloud Platforms:** AWS, Azure, GCP
- **Containers & Orchestration:** Docker, Kubernetes, Rancher, Helm
- **CI/CD & Release Engineering:** Jenkins, GitHub Actions, Harness, GitOps (ArgoCD)
- **Infrastructure as Code:** Terraform, AWS CloudFormation
- **Monitoring & Observability:** Prometheus, Grafana, Datadog, Dynatrace, Kibana (ELK)
- **MLOps (in progress):** Actively learning MLflow, Kubeflow, and Airflow for ML pipeline orchestration
- **Collaboration & Agile:** Jira, Confluence, Scrum, Agile Methodologies

Certifications

- AWS Certified Solutions Architect – Associate
- AWS Certified CloudOps Engineer – Associate
- AWS Certified Cloud Practitioner
- Google Cloud Professional Cloud Architect

Education

Bachelor of Engineering – Electronics & Telecommunication — 2019 – 2023
Pune University | CGPA: 8.11/10
